

Public Water Supply (PWS) & Inventory Information	
PWS Name:	West Davis Rural Water Corporation
PWSID:	OK3005004
PWS System Classification:	Community
Enter Date Last Updated:	04/15/26
Is this the Initial Inventory or an Inventory Update?	Initial Inventory
PWS System's Preferred Point of Contact (Name and Phone Number/Email Address)	Julia Sinclair-580-868-2269-westdavisruralwatercorp@gmail.com

Part 1: Historical Records Review	
Type of Record	Describe the Records Reviewed for Your Inventory
1. Previous Materials Evaluation <i>Example: Locations of Tier 1 lead tap sampling locations that are served by a lead service line.</i>	
2. Construction Records and Plumbing Codes <i>Examples: Local ordinance adopting an international plumbing code. Permits for replacing lead service lines.</i>	Construction records of Distribution system.
3. Water System Records <i>Examples: Capital improvement plans. Standard operating procedures. Engineering standards.</i>	
4. Distribution System Inspections and Records <i>Examples: Distribution system maps. Tap cards. Service line repair/replacement records. Inspection records. Meter installation records.</i>	Distribution System Map. Service line repairs, Inspection Records
5. Other Records	

Part 2: Identifying Service Line Material During Normal Operations

1. During which normal operating activities are you collecting information on service line material? Check all that apply.

- | | |
|--|--|
| ☐ Water meter reading | ☒ Water main repair or replacement |
| ☒ Water meter repair or replacement | ☐ Backflow prevention device inspection |
| ☒ Service line repair or replacement | ☐ Other |

If "Other", please explain:

2. Did you develop or revise standard operating procedures to collect service line material information during normal operation?

Yes

If "Yes", please describe:

Operators are to make a record of material when placing/replacing meters, repairs of lines in system.

Part 3: Service Line Investigations

1. Identify the service line investigation methods your system used to prepare the inventory (check all that apply). If a water system chooses an investigation method not specified by the state under 40 CFR §141.84(a)(3)(iv), state approval is required. ***Note that investigations are not required by the LCRR but can be used by systems to assess accuracy of historical records and gather information when service line material is unknown.***

- | | |
|--|--|
| ☒ Visual Inspection at the Meter Pit | ☒ Water Quality Sampling - Other |
| ☒ Customer Self-Identification | ☐ Mechanical Excavation |
| ☐ CCTV Inspection at Curb Box - External | ☐ Vacuum Excavation |
| ☐ CCTV Inspection at Curb Box - Internal | ☐ Predictive Modeling |
| ☐ Water Quality Sampling - Targeted | ☐ Other |
| ☐ Water Quality Sampling - Flushed | |
| ☐ Water Quality Sampling - Sequential | |

If "Other", please explain:

2. If "Predictive Modeling", please briefly describe the model and inputs used:

Part 4. Inventory Summary Table ¹

When you are using the **Service Line Information** worksheet, the classifications in the Column "Material Classification for the Entire Service Line" (Column M) will be used to calculate the total number of service lines for each of the four material classifications below.

Service Line Material Classification	Definition	Total Number of Service Lines (REQUIRED to be reported under the LCRR)
Lead	Any portion of the service line is known to be made of lead. ²	0
Galvanized Requiring Replacement (GRR)	The service line is not made of lead, but a portion is galvanized and the system is unable to demonstrate that the galvanized line was never downstream of a lead service line.	0
Non-Lead	All portions of the service line are known NOT to be lead or GRR through an evidence-based record, method, or technique.	95
Lead Status Unknown	The service line material is not known to be lead or GRR. For the entire service line or a portion of it (in cases of split ownership), there is not enough evidence to support material classification.	411
TOTAL		506

Notes

¹ This summary table is for reporting material for the entire service line connecting the water main to the customer's plumbing. Remember that systems must track the system-owned and customer-owned portions separately in their inventory.

² A lead-lined galvanized service line is consistent with the definition of an LSL under the LCRR ("a portion of pipe that is made of lead, which connects the water main to the building inlet") (40 CFR §141.2) and must therefore be classified in the inventory as an LSL. Do NOT, however, count non-lead service lines with a lead gooseneck or pigtail as lead service lines.

Part 5. Public Accessibility

How are you making your inventory publicly accessible? Check all that apply. *Remember that if your system serves > 50,000 people, you **must** provide the inventory online.*

- | | |
|---|--|
| ☐ Interactive online map | ☐ Printed tabular data |
| ☐ Static online map | ☐ Information on water utility mailings or newsletter |
| ☐ Online spreadsheet | ☒ Hard copy information available in water system office |
| ☐ Printed service line map | ☐ Other |

If "Other", please describe:
